

Rationalizing The

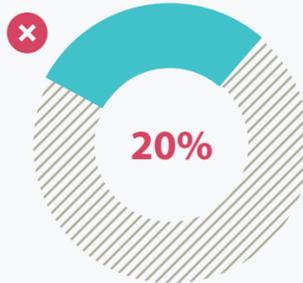

IT LANDSCAPE

Many large companies focus on "keeping the lights on", where the main objective is maintenance and preventing system breakdowns, instead of putting their efforts on new projects and innovation. The struggle is no longer to align IT with the business. IT is the business. The goal now is to align the IT side of the business with operations. Delivering value means using IT to innovate and open new opportunities for business growth.

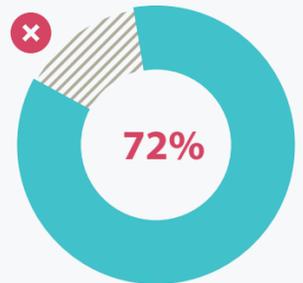

REDUCE IT COSTS AND COMPLEXITY

48% of the CIOs believe they have more applications than the business requires.¹

At least 20% of their current applications actually could be replaced or retired.¹

IT leaders says that 72% of their budgets are spent on replacing or expanding capacity and supporting ongoing operations and maintenance.²

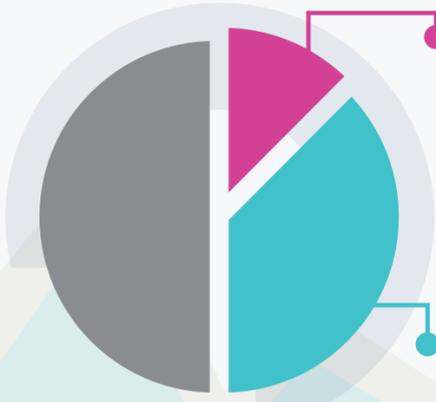

REGAIN CONTROL OF YOUR IT ASSETS

More than 25% of IT spending are already outside of CIOs' control (predicted to grow to 40% by 2015)³

There is over \$60 billion worth of unlicensed software in use by global organizations, exposing them to numerous risks, which may have a direct impact on their operational performance.⁴

INCREASE SHARE OF IT SUPPORTING INNOVATIVE PROJECTS

Only 18% of IT execs said they are currently focused on driving business innovation.⁶

36% of IT staff's time is spent managing and maintaining legacy systems⁵

INVEST IN NEXT GENERATION OF IT PORTFOLIO MANAGEMENT SOLUTIONS
